According to our (Global Info Research) latest study, the global CPU Air Cooling Radiator market size was valued at US\$ 2147 million in 2024 and is forecast to a readjusted size of USD 2745 million by 2031 with a CAGR of 3.6% during review period.

CPU air cooling radiator is a common type of radiator, which includes a cooling fan and a heat sink. The principle of this radiator is to transfer the heat generated by the CPU to the heat sink, and then take the heat away through the fan.

As the CPU operating frequency continues to increase, the heat generated by it will also increase accordingly. Therefore, in order to better adapt to the needs of CPU heat dissipation, future CPU air-cooling radiators may use more efficient heat dissipation materials and designs to achieve higher heat dissipation performance.
