Abstracts

The global CPU Cooler market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

CPU Cooler is required to remove the waste heat produced by CPU, to keep CPU within permissible operating temperature limits.

Computer Components are often designed to generate as little heat as possible, and computers and operating systems may be designed to reduce power consumption and consequent heating according to workload, but more heat may still be produced than can be removed without attention to cooling. Use of heatsinks cooled by airflow reduces the temperature rise produced by a given amount of heat. Attention to patterns of airflow can prevent the development of hotspots. Computer fans are widely used along with heatsinks to reduce temperature by actively exhausting hot air. There are also more exotic cooling techniques, such as liquid cooling.

In USA, CPU Cooler key players include Antec, Corsair, Swiftech, NZXT, Nexustek, etc. The top five players hold a share about 65%.

Southern Region is the largest market, with a share about 60%, followed by Western Region and Northern Region, having a total share about 35 percent.

In terms of product, the segment includes Air Cooler, Water Cooler. And in terms of application, the application includes Gaming Use, Commercial Use, Other Use.
