The global CPU Cooling Coating For Electronic Products market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Thermal paste, also known as thermal paste, is a paste-like substance with good thermal conductivity (but mostly non-conductive) that is generally used at the interface between a heat sink and a heat source (such as high-power semiconductor components). The main function of the thermal paste is to remove the air or gap at the interface (the air has poor thermal conductivity), so that the thermal conductivity can be maximized. Thermal paste is a thermal interface material.
