The global CR39 (Columbia Resin 39) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

CR39 is widely used as a material for eyeglass lenses due to its high optical clarity, impact resistance, and lightweight properties. It can also be tinted or coated with various materials to enhance its performance, such as anti-reflective coatings, scratch-resistant coatings, and UV protection coatings.

In addition to eyeglass lenses, CR39 is also used in other applications such as safety goggles, face shields, and other protective equipment. Its resistance to impact and chemicals makes it an ideal material for these types of products.

The CR39 market is expected to continue growing in the coming years due to the increasing demand for eyewear, particularly in developing regions where access to vision correction is improving. Additionally, advancements in lens coatings and manufacturing technologies are expected to drive further adoption of CR39 in the eyewear industry.

CR39, also known as Columbia Resin 39, is a type of thermosetting plastic that was first developed by the Columbia Resins Project in the United States during the 1940s. It is composed of a monomer called diethylene glycol bis(allyl carbonate) that undergoes a polymerization reaction to form a rigid, clear, and durable material.
