According to our (Global Info Research) latest study, the global Cranberry Extracts market size was valued at US\$ 143 million in 2025 and is forecast to a readjusted size of US\$ 229 million by 2032 with a CAGR of 7.1% during review period.

In 2024, global Cranberry Extracts production reached approximately 687 MT, with an average global market price of around US\$ 191.6 kg.

Cranberry extracts are concentrated bioactive preparations derived from the fruit of the cranberry plant (*Vaccinium macrocarpon*), which is native to North America but cultivated in many parts of the world. The extraction process typically involves separating the active phytochemicals?particularly proanthocyanidins, flavonoids, organic acids, vitamins, and fibers?from the raw fruit using water, ethanol, or other solvent-based methods. The resulting extract can appear as a powder, liquid concentrate, or capsule ingredient depending on the intended application.

Cranberry extracts are valued not only for their nutritional properties but also for their therapeutic benefits, especially in urinary tract health. Decades of scientific investigation have established that the unique proanthocyanidins found in cranberries prevent certain bacteria, particularly *Escherichia coli*, from adhering to the lining of the urinary tract. This property makes cranberry extracts widely used in dietary supplements and functional foods aimed at reducing the recurrence of urinary tract infections (UTIs).

Beyond urinary health, cranberry extracts have also been linked to antioxidant activity, cardiovascular health, oral health, digestive wellness, and anti-inflammatory benefits. Consequently, the definition of the cranberry extracts market encompasses not just a

food or beverage ingredient segment, but also a nutraceutical, pharmaceutical, and cosmetic industry component.

Modern consumers increasingly embrace preventive health practices. Rather than waiting for illness to occur, they seek functional foods and supplements that help them maintain wellness. Cranberry extracts perfectly align with this trend. The extracts are natural, plant-based, and supported by clinical evidence for urinary tract health, which resonates with consumers who prefer scientifically validated natural solutions over synthetic pharmaceuticals.

Urinary tract infections disproportionately affect women, especially as they age. With global populations getting older, particularly in Europe, North America, and parts of Asia, there is a growing pool of consumers who stand to benefit from cranberry extract supplementation. Additionally, increased awareness of women's health issues has prompted both healthcare practitioners and consumers to explore non-antibiotic solutions for recurring UTIs, fueling demand for cranberry extracts.

Consumers worldwide are shifting away from synthetic additives and embracing botanical ingredients. Cranberry extract fits within this 'clean label' movement. Its identity as a fruit-derived extract makes it highly appealing to food, beverage, and supplement manufacturers who want to highlight natural ingredients on product labels.

Cranberry has been studied more extensively than many other botanicals. This growing body of research supports both traditional uses and emerging applications, creating credibility in the eyes of consumers, healthcare professionals, and regulators. As more clinical studies confirm cranberry's benefits, consumer trust and market penetration will likely expand.

Global Cranberry Extracts key players include Indena, Nexira, Naturex, Bio-Botanica, Diana Food, etc. Global top five manufacturers hold a share over 60%. North America is the largest market, with a share about 40%.
