## Abstracts

According to our (Global Info Research) latest study, the global Cranial Remolding Orthosis market size was valued at USD 128.6 million in 2023 and is forecast to a readjusted size of USD 200 million by 2030 with a CAGR of 6.5% during review period.

Cranial Remolding Orthosis is a medical device mainly used to adjust the growth direction of the baby's skull to increase the symmetry of the head. By acting as a mold for the baby's head, it limits further asymmetric growth and guides flat areas to grow into the helmet's voids in a normal, rounded pattern.

The design and use of Cranial Remolding Orthosis may be more personalized and refined. With the development of 3D printing and scanning technology, doctors can more accurately obtain data on the shape of a child's head, thereby customizing orthotics that fit better and are more effective.
