## Abstracts

The global Cranial Remolding Orthosis market size is expected to reach \$ 200 million by 2030, rising at a market growth of 6.5% CAGR during the forecast period (2024-2030).

The design and use of Cranial Remolding Orthosis may be more personalized and refined. With the development of 3D printing and scanning technology, doctors can more accurately obtain data on the shape of a child's head, thereby customizing orthotics that fit better and are more effective.

Cranial Remolding Orthosis is a medical device mainly used to adjust the growth direction of the baby's skull to increase the symmetry of the head. By acting as a mold for the baby's head, it limits further asymmetric growth and guides flat areas to grow into the helmet's voids in a normal, rounded pattern.
