The Craniomaxillofacial Bone Plate System is an internal fixation device specially designed for the repair and stabilization of fractures in the skull, facial bones, and mandible. It typically includes a range of bone plates in various shapes and sizes, matching screws, and dedicated surgical instruments. This system is modularly designed to conform to different anatomical regions and accommodate complex fracture patterns and reconstruction needs. Modern craniomaxillofacial plate systems are primarily made of high-strength, lightweight titanium alloys, offering excellent biocompatibility and mechanical stability. To reduce postoperative soft tissue irritation and support optimal healing, the system features a low-profile design, countersunk screw holes, and smooth, contoured edges. It is widely used in maxillofacial trauma, post-tumor reconstruction, and correction of congenital deformities.
