Crash Attenuator Trucks are special vehicles that provide safety protection for road construction. When operating, they are usually placed at the end of the construction closed area in the direction of the vehicle, providing warnings and active safety guidance to the vehicles behind, and building a buffer protection area between the vehicle and the construction area. If an oncoming vehicle accidentally hits the construction closed area, it will first collide with the crash buffer vehicle, and the crash buffer package will deform to absorb the impact energy, reduce the impact force, reduce the degree of damage, and minimize the probability of collision between personnel and equipment in the construction area.
