According to our (Global Info Research) latest study, the global Cream Centrifuge market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Cream Centrifuge is used for standard physical and chemical testing of relative density and fat of milk and dairy products by Geber's method and Inihoff's alkali method. Gebo centrifuge has the function of heating and constant temperature. It is mainly suitable for the physical and chemical inspection of dairy products and is a routine equipment for dairy product inspection. The temperature of the milk fat tube of the Geber centrifuge/cream centrifuge is kept above 50°C during the centrifugation process, which can not only reduce the time of the sample water bath, but also make the test results more reliable.
