## Abstracts

The global Cream Centrifuge market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cream Centrifuge is used for standard physical and chemical testing of relative density and fat of milk and dairy products by Geber's method and Inihoff's alkali method. Gebo centrifuge has the function of heating and constant temperature. It is mainly suitable for the physical and chemical inspection of dairy products and is a routine equipment for dairy product inspection. The temperature of the milk fat tube of the Geber centrifuge/cream centrifuge is kept above 50°C during the centrifugation process, which can not only reduce the time of the sample water bath, but also make the test results more reliable.

This report studies the global Cream Centrifuge production, demand, key manufacturers, and key regions.
