Abstracts

According to our (Global Info Research) latest study, the global Creatinine Measurement market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Creatinine is the waste product of creatine, which the muscles use to make energy. Typically, creatinine travels in the blood to the kidneys where it leaves the body in the urine. High levels in the blood might indicate that the kidneys are not working correctly. A serum creatinine test measures the level of creatinine in the blood and provides an estimate of how well the kidneys filter (glomerular filtration rate). A creatinine urine test can measure creatinine in the urine.

Roche, Siemens Healthineers and Danaher are among the leading players in the industry, with the top three accounting for more than 42% of revenues in 2019.
