Abstracts

According to our (Global Info Research) latest study, the global Cremastra Appendiculata Extract market size was valued at US\$ 15.85 million in 2025 and is forecast to a readjusted size of US\$ 24.56 million by 2032 with a CAGR of 6.3% during review period.

In 2025, the global production of Cremastra Appendiculata extract is approximately 280 tons, with an average selling price of about US\$55 per kilogram. The production capacity in 2025 is 350 tons, with an average gross profit margin of approximately 22-30%. Cremastra Appendiculata extract refers to the substance extracted from the dried pseudobulbs of orchid plants such as *Cremastra appendiculata*, *Pleione bulbocodioides*, or *Pleione yunnanensis*. Its main functions are clearing heat and detoxifying, and reducing swelling and dispersing nodules. It is a product obtained after processing and extraction of the traditional Chinese medicine 'Cremastra appendiculata,' and is often used to treat conditions such as carbuncles and sores.

In the upstream of the Cremastra Appendiculata extract industry chain, the core raw materials are mainly the dried pseudobulbs of wild or semi-wild cultivated orchid plants such as *Cremastra appendiculata* and *Pleione bulbocodioides*, i.e., the traditional Chinese medicine 'Cremastra appendiculata.' Its supply is significantly affected by natural resources, harvesting costs, and artificial cultivation techniques. Downstream application industries are mainly concentrated in the pharmaceutical industry (as a key raw material for anti-tumor and anti-gout preparations such as colchicine tablets), high-end skincare and functional cosmetics industries (utilizing its antioxidant and anti-inflammatory properties), and the research and development and production of some health products and modern Chinese medicine compound preparations.

Cremastra Appendiculata Extract, primarily containing colchicine, an active ingredient extracted from the Cremastra appendiculata plant, has significant applications in the pharmaceutical and health supplement industries. Colchicine is widely used to treat gout, rheumatoid arthritis, and some genetic diseases, and is particularly effective in treating acute gout attacks. With the accelerating global aging process and changing lifestyles, the number of patients suffering from gout, arthritis, and other related diseases continues to increase, driving the demand for Cremastra Appendiculata Extract.

In the market, the demand for Cremastra Appendiculata Extract is mainly concentrated in the pharmaceutical field, particularly in the production of anti-inflammatory and anti-rheumatic drugs. Furthermore, with increasing consumer preference for natural ingredients, Cremastra Appendiculata Extract is gradually entering the health supplement market, used for boosting immunity and anti-inflammatory effects. China, Europe, and North America are the main markets for Cremastra Appendiculata Extract, with China, as a major producer of Cremastra appendiculata, being at the core of the global supply chain.

The Cremastra Appendiculata Extract market is expected to continue growing in the coming years, benefiting from its important role in treating arthritis, gout, and other diseases. Simultaneously, with advancements in extraction technology and continuously increasing market demand, prices and production are also expected to gradually optimize. Overall, the Cremastra Appendiculata Extract market shows a healthy growth trend, with significant potential for applications in the pharmaceutical and health supplement sectors.
