Abstracts

The global CRISPR Kit market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

CRISPR/Cas9, is an RNA-guided targeted genome editing tool which allows researchers to do gene knockout, knockin SNPs, insertions and deletions in cell lines and animals. The CRISPR/Cas9 genome editing system requires two components: Cas9, the endonuclease, and a guide RNA (sgRNA) which guides Cas9 to a specific location in the genome sequence. With the protospacer-adjacent motif (PAM - the sequence NGG) present at the 3' end, Cas9 will unwind the DNA duplex and cleave both strands upon recognition of a target sequence by the guide RNA.
