Critical limb ischemia (CLI) is a severe blockage in the arteries of the lower extremities, which markedly reduces blood-flow. It is a serious form of peripheral arterial disease, or PAD. PAD caused by atherosclerosis, the hardening and narrowing of the arteries over time due to the buildup of fatty deposits called plaque. Currently, the standard of care for patients battling CLI is balloon angioplasty, which relies on a small balloon delivered via a catheter to the blockage to compress it against the arterial wall, opening the vessel and restoring blood flow.

Global critical limb ischemia treatment includes Medtronic, Boston Scientific, Abbott, COOK and Cardiovascular Systems, etc. Global top 3 companies hold a share over 59%. North America is the largest market, with a share about 39%, followed by Europe and Asia-Pacific with the share about 31% and 22%.
