Abstracts

According to our (Global Info Research) latest study, the global Crop Micronutrient market size was valued at USD 10150 million in 2023 and is forecast to a readjusted size of USD 17440 million by 2030 with a CAGR of 8.0% during review period.

Crop Micronutrient includes nutrients such as boron, zinc, molybdenum, iron, manganese, etc. Although plants require very little trace elements, their effects on plant growth and development are as important as large amounts of elements. When an agriculture micronutrient is lacking, crop growth and development are significantly affected, yield is reduced, and quality is degraded. On the other hand, too much agriculture micronutrient can poison crops, affecting yield and quality, and even endangering human and animal health in severe cases. With the continuous increase of crop yield and the large-scale application of chemical fertilizers, the application of trace element fertilizers has become increasingly urgent. Among the agriculture micronutrient fertilizers, iron, manganese, zinc, copper sulfate, boric acid, molybdcic acid, and monovalent salts thereof are usually used.

According to the 2022 Statistical Yearbook of the United Nations Agricultural and Food Organization, there are about 866 million people work in agriculture, accounting for more than a quarter of the world's total labor force and creating \$3.6 trillion in added value. According to data, North America was the region with the most fertilizer use in the world in 2021, accounting for 32.6% of the global fertilizer market size. From the perspective of demand, the proportion of micro-fertilizers used in many European countries has reached 45-60%, and the proportion of use in the United States was as high as 60-70%. According to our "Agriculture Research Center", the global fertilizer consumption was nearly 200 million tons in 2022. According to the National Bureau of

Statistics, the total output value of China's fertilizer manufacturing industry in 2021 was 618.572 billion yuan, with a year-on-year increase of 5.05%. Global fertilizer consumption in 2021 increased by nearly 12 million tons, which compared to 2020.
