Scope of the Report:

This report focuses on the Cross-Linked Polyethylene in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Plumbing is estimated to be the largest application of cross-linked polyethylene. Exposure to moisture, acids, salts, and climatic changes lead to failure in the traditional copper and PCV pipes in plumbing. Thus, cross-linked polyethylene pipes are an efficient alternative which not only are resistant to moisture, acids, and salts, but are also easier to install and provide superior performance. Therefore, the widespread use of cross-linked polyethylene in the plumbing application is making it the largest application in The global cross-linked polyethylene market.

The Asia-Pacific region led The global cross-linked polyethylene market, both, in terms of value and volume, in 2015. China is the largest market for cross-linked polyethylene in the Asia-Pacific region, and accounted for a major share of the market in terms of value, in 2015. The growing construction sector, increasing R&D activities initiated by major players, the ease of availability of raw material, and increasing development strategies to meet the demand for cross-linked polyethylene in the established and emerging applications, are the key growth drivers for cross-linked polyethylene in this region.

The worldwide market for Cross-Linked Polyethylene is expected to grow at a CAGR of roughly 6.4% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
