## **Abstracts**

According to our (Global Info Research) latest study, the global Crosslinked Shrink Film market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Crosslinked shrink film, also known as crosslinked polyolefin film, is a type of plastic film that undergoes a crosslinking process to enhance its shrinkage properties. It is made from a blend of polyethylene and polypropylene resins.

The crosslinking process involves using high-energy sources such as electron beams or chemical agents to chemically bond or link the polymer chains within the film, creating a three-dimensional network structure. This crosslinking increases the film's strength, shrinkage percentage, and durability compared to traditional shrink films.
