## Abstracts

The global Crosslinked Shrink Film market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Crosslinked shrink film, also known as crosslinked polyolefin film, is a type of plastic film that undergoes a crosslinking process to enhance its shrinkage properties. It is made from a blend of polyethylene and polypropylene resins.

The crosslinking process involves using high-energy sources such as electron beams or chemical agents to chemically bond or link the polymer chains within the film, creating a three-dimensional network structure. This crosslinking increases the film's strength, shrinkage percentage, and durability compared to traditional shrink films.

This report studies the global Crosslinked Shrink Film production, demand, key manufacturers, and key regions.
