Abstracts

According to our (Global Info Research) latest study, the global Crosslinking Agent TAC market size was valued at US\$ 48.98 million in 2025 and is forecast to a readjusted size of US\$ 71.28 million by 2032 with a CAGR of 5.8% during review period.

In 2025, global Crosslinking Agent TAC production reached approximately 5,700 tons, with an average global market price of around US\$8.35 per kilogram. Co-crosslinking Agent (TAC) is a light yellow to colorless liquid or crystal at room temperature with a melting point of 25-27°, a density of 1.1133 g/ml (at 30°), a viscosity of 1.26×10⁻² Pa·s (30°) and a refractive index of 1.5049 (25°). TAC is hardly soluble in water and soluble in ethanol, acetone, heptane, petroleum ether, solvent oil, soybean extract oil, halogenated hydrocarbon, and the like. TAC is stable at room temperature and can be stored stably for a long time.

Crosslinking Agent TAC, as a trifunctional polymer additive, holds a stable niche position in the global specialty chemicals market. The downstream demand structure shows diversified characteristics, with core applications covering high-performance composite materials, specialty rubbers, electronic encapsulation materials and photovoltaic module encapsulation, with obvious differences in demand focus across regional markets. European market demand concentrates on high-end automotive parts and industrial rubber products, with strict requirements for product purity and environmental compliance. The North American market, driven by the photovoltaic and aerospace industries, has prominent demand for special specifications with high temperature and weather resistance. The Asia-Pacific region, with its complete manufacturing industry chain, has become the world's largest production and consumption market, with China occupying a core position.

The market competition pattern presents a stratified characteristic. European leading enterprises maintain strong competitiveness in high-end application fields through long-term technology accumulation and brand advantages, and their integrated production systems ensure stable supply and consistent quality. Chinese enterprises, relying on local industrial chain supporting advantages and cost control capabilities, dominate the mid-to-low-end market and gradually penetrate into high-end fields, with continuously expanding product export scope.

Industry development is driven by both policy and technological factors. Stricter global environmental regulations promote the industry's transformation towards low volatility and low toxicity, and bio-based raw material substitution has become an important R&D direction. The continuous development of new energy and high-end manufacturing industries drives the demand growth for high-performance crosslinking agents, while putting forward higher requirements for crosslinking efficiency and functional integration. Upstream and downstream industrial chain cooperation has been strengthened, with enterprises jointly developing customized products with downstream customers to meet the needs of specific application scenarios.
