According to our (Global Info Research) latest study, the global Crude Helium market size was valued at US\$ 3215 million in 2024 and is forecast to a readjusted size of USD 4701 million by 2031 with a CAGR of 5.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

?Crude Helium? refers to unrefined helium gas extracted from natural gas reserves, typically containing impurities such as nitrogen, methane, carbon dioxide, and trace hydrocarbons. It is an intermediate product obtained during the initial stages of helium production, where raw natural gas undergoes cryogenic separation or pressure swing adsorption (PSA) to isolate helium from other components. Crude helium generally has a helium concentration ranging from 50% to 90%, depending on the source and extraction process, and requires further purification (e.g., through catalytic oxidation or membrane filtration) to achieve commercial-grade purity (99.99% or higher) for industrial, medical, or technological applications.
