The global Crude Heparin market size is expected to reach \$ 5318.6 million by 2029, rising at a market growth of 5.9% CAGR during the forecast period (2023-2029).

Global key players of crude heparin include Bioiberica, Shenzhen Hepalink, Sanofi, Nanjing King-friend and Fengrun Biological Technology. The top three players hold a share about 30%. The global crude heparin products are mainly produced in Europe and China. Asia-Pacific is the largest market, has a share about 57%, followed by North America and Europe, with share 21% and 18%, separately. In terms of product type, Pig Intestine Mucosa Heparin plays an important role with a share over 99%. In terms of application, LMWH holds an important share, with a share of 90%.

Heparin is one of the oldest drugs currently in widespread clinical use. It was originally isolated from canine liver cells. Heparin was discovered by Jay McLean and William Henry Howell in 1916. Heparin prevents the blood from clotting and is used to treat and prevent deep vein thrombosis and pulmonary embolism. It is also used as part of the treatment of myocardial infarction and unstable angina. Another application of heparin is an inner surface anticoagulant on various experimental and medical devices such as test tubes and renal dialysis machines. Crude heparin is the starting material intended for further processing by FDA drug establishments into heparin sodium USP API (active pharmaceutical ingredient), not a finished drug product. The scope of this report is mainly about Crude Heparin, Crude heparin is the upstream raw material for heparin.

This report studies the global Crude Heparin production, demand, key manufacturers, and key regions.
