According to our (Global Info Research) latest study, the global Crude Oil Defoamers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Crude oil defoamers are chemicals used to deal with foam problems in crude oil. During oil field production and oil transportation, crude oil is often mixed with water and gas, leading to the formation of foam. Foam can cause a range of problems, including reduced production efficiency, increased equipment maintenance costs and reduced crude oil quality. The role of crude oil defoamers is to destroy and control these foams so that crude oil can be handled and transported more efficiently.
