Abstracts

According to our (Global Info Research) latest study, the global Cruiser Electric Bike market size was valued at US\$ 621 million in 2025 and is forecast to a readjusted size of US\$ 1103 million by 2032 with a CAGR of 8.5% during review period.

A cruiser electric bike is a type of electric bicycle designed for comfortable long-distance riding. It typically features an ergonomic seat, wide handlebars, and a lower pedal position, combined with an electric assist system to reduce riding fatigue and improve range and riding experience. This model is suitable for urban commuting, leisure rides, and light long-distance travel.

Global production of cruiser e-bikes is projected to reach 1.83 million units by 2025, with an average price of \$330 per unit.

A cruiser electric bike is a type of e-bike that emphasizes a comfortable riding posture, stability, and leisure-oriented use. It typically features a low step-through frame, wide saddle, swept-back handlebars, and a mid- to low-power electric assist system, making it suitable for urban commuting, recreational riding, and short-distance travel. The upstream mainly includes suppliers of frames and forks, motors, batteries, electronic control systems, drivetrain and braking components, as well as tires and structural parts, with motors and lithium batteries having the greatest impact on overall performance and cost. Downstream applications are primarily concentrated in the consumer market, especially in urban leisure mobility, tourist and resort areas, community short-distance travel, and shared mobility scenarios in North America and Europe, where consumers place greater emphasis on comfort, design, range, and brand value.

The development trend of cruiser electric bikes focuses on more personalized styling, lighter and more efficient electric assist systems, increased battery capacity, and the integration of smart features such as app connectivity, anti-theft, and positioning functions. Driving factors include the promotion of urban slow-mobility systems, growing awareness of low-carbon transportation, the rise of leisure and healthy lifestyles, and the long-standing cultural popularity of cruiser bicycles in North America. Challenges include cost constraints for price-sensitive consumers, regulatory differences in power and speed limits across regions, lithium battery price volatility, and the need to build effective sales channels and after-sales service networks. In terms of gross margin, cruiser electric bikes typically achieve mid-range margins of around 20% to 35%, with higher margins for brands that offer strong design differentiation, brand recognition, and direct-to-consumer models, while more standardized or OEM-focused products tend to have lower margins.
