Abstracts

The global Crushed Glass market size is expected to reach \$ 610.3 million by 2029, rising at a market growth of 5.0% CAGR during the forecast period (2023-2029).

Glass material is a recyclable resource. By recycling and processing discarded glass items, we can reduce the demand for natural resources and reduce the environmental impact caused by landfills. Therefore, the recycling and reuse of glass fragments is an important environmental action.

Crushed Glass refers to the glass fragments formed after processing of discarded glass materials, which are usually used for recycling. These glass fragments can come in different colors, shapes and sizes, depending on the characteristics of the original glass item and how it was processed.
