The global Crushed Granular Activated Carbon market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Crushed Granular Activated Carbon (GAC) is a form of activated carbon that is made by crushing activated carbon into small particles. It is commonly used for water and air purification as it has a high surface area that can adsorb impurities such as organic compounds and chlorine. The small particle size also allows for better flow rates, which makes it a popular choice for large-scale water treatment facilities.
