## Abstracts

According to our (Global Info Research) latest study, the global Crusher Buckets for Excavators market size was valued at USD 423.9 million in 2023 and is forecast to a readjusted size of USD 551.4 million by 2030 with a CAGR of 3.8% during review period.

Crusher buckets for excavators are specialized attachments designed to crush and reduce the size of various materials directly on the construction site. They are commonly used in construction, demolition, and recycling applications.

Crusher buckets typically feature a jaw-like structure with fixed and moving jaws, similar to a traditional crusher. They are attached to the excavator's arm or boom and are operated by the hydraulic system of the excavator. Crusher buckets are used to crush a wide range of materials, including concrete, rubble, rock, and bricks. The jaws of the bucket apply pressure to the material, breaking it down into smaller, more manageable pieces. Some crusher buckets also have additional features such as a magnet for separating steel reinforcing from concrete. Using a crusher bucket for excavators offers several advantages. It eliminates the need for hauling and disposing of materials off-site, saving time and transportation costs. Additionally, crushing materials on-site allows for immediate reuse or recycling, reducing the need for new materials. It also helps to reduce environmental impact by minimizing the amount of waste produced. Crusher buckets for excavators come in various sizes and capacities, allowing them to be used with different types of excavators. The operator can adjust the size of the crushed material by changing the gap between the jaws of the bucket.

The Global Info Research report includes an overview of the development of the
