According to our (Global Info Research) latest study, the global Cryo-Transmission Electron Microscopes market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Cryo-transmission electron microscopes is a version of electron microscopy, which was invented in the 1930s. These microscopes use beams of electrons rather than light to form images of samples. Because the wavelength of an electron is much shorter than the wavelength of light, electron beams reveal much smaller things. Cryo-electron microscopy is increasingly becoming a mainstream technology for studying the architecture of cells, viruses and protein assemblies at molecular resolution.
