## Abstracts

According to our (Global Info Research) latest study, the global Cryogenic Biobanking Services market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The cryogenic biobanking service industries operate cryogenic storage facilities. These facilities are used to store biological samples such as human blood, organs, tissues and cells that are used in pharmaceutical companies, hospitals, research laboratories and universities. Cryogenic biobanks preserve biological samples such as tissues, cells, saliva, urine, nucleic acid and organs in order to gain long term benefits of these samples. The duration for preservation of biological samples is either short-term or long-term. The main objective behind cryogenic biobanking is to maintain the functionality and stability of biological samples throughout their preservation period. In addition, advanced equipment like liquid nitrogen tanks, freezers, refrigerators, cryogenic vials, cryogenic boxes are commonly used in order to maintain sample stability during storage period.

Geographically, North America is considered to be the largest market of cryogenic biobanking services due to increasing research and development activities in pharmaceutical and biotechnology industries. In addition, rising investment by the U.S. government and non-government organizations in biobanking services will further drive the market growth. Furthermore, increasing number of cancer patients which demands use of biospecimen materials for the treatment of cancer. Cryogenic biobanking is considered as most useful technique for the storage of these biospecimen materials which would ultimately drive the market growth.
