A cryogenic liquid hydrogen storage container is a high vacuum insulated container specially used to store liquid hydrogen, often referred to as a 'Dewar flask' or 'cryogenic tank'. Invented by Scottish physicist James Dewar, the container has a double-layer structure with a high vacuum layer in the middle to minimize heat conduction and convection, thereby effectively maintaining the low temperature of liquid hydrogen (about -253°C). This design ensures the stability and safety of liquid hydrogen during storage and transportation, and is widely used in aerospace, energy, scientific research and other fields.
