According to our (Global Info Research) latest study, the global Cryogenic Nitrogen Rejection Unit market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Cryogenic Nitrogen Rejection Unit (NRU) is a specialized system used in the oil and gas industry to separate and remove nitrogen from natural gas streams. Natural gas extracted from underground reservoirs often contains impurities, including nitrogen, that need to be removed to meet quality standards and market specifications. Cryogenic NRUs are essential in the natural gas industry, particularly for gas fields with high nitrogen content. By removing nitrogen, the quality and market value of the natural gas are improved, as nitrogen can impact combustion efficiency and cause issues during transportation and processing.
