Scope of the Report:

This report focuses on the Cryogenic Pump in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Positive displacement cryogenic pump is projected to be the highest growing segment on the basis of type of cryogenic pumps from 2016 to 2021. The reason behind the same would be increasing use of positive displacement pumps in end-use industries such as energy and power, shipbuilding, food & beverage, and healthcare, given its compact size. Asia-Pacific is the largest market for positive displacement cryogenic pumps, due to increasing energy demand in the region.

On the basis of cryogenic gases, LNG is projected to be the fastest growing market segment during the forecast period. This growth is attributed to increasing use of LNG for power generation in the energy and power industry and growing usage of oil tankers for transportation in the shipbuilding industry. The LNG market is expected to witness maximum growth in the Middle East region. Moreover, increasing focus on renewable generation is likely to boost the electronics segment.

The worldwide market for Cryogenic Pump is expected to grow at a CAGR of roughly 3.6% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
