Abstracts

According to our (Global Info Research) latest study, the global Cryogenic Spice Grinding market size was valued at USD 18 million in 2023 and is forecast to a readjusted size of USD 20 million by 2030 with a CAGR of 1.7% during review period.

The low temperature pulverizer system is used for various materials that cannot be pulverized under normal temperature.Particle size has a major impact on the texture, mouthfeel and processing of spices.%li%The size of each particle affects the reactivity, flow and solubility of ingredients.

Achieving the desired particle size distribution usually varies for each spice, as some require freezing.High-oil spices like nutmeg and nutmeg require a different process—low-temperature grinding.%li%The cryogenic grinding process cools the spices with liquid nitrogen to embrittlement temperature before sending them to the grinder, ensuring optimum particle size.%li%Removing the heat helps the spices retain their optimum flavor and prevents the volatile components of the spice from dissipating.

Major global low temperature spice grinding players include YENCHEN MACHINERY CO., LTD, MechAir, Jiangyin Baoli Machinery Manufacturing Co., LTD. Ltd, Sifter International and Hosokawa Micron Group. The top five players in the world by revenue account for nearly 35%.
