## Abstracts

According to our (Global Info Research) latest study, the global Cryogenic Storage Tanks & Vessels market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

As the name suggests, cryogenic storage tanks are vacuum flasks used for storing cryogenics, such as liquid helium or liquid nitrogen, which have a boiling point lower than room temperature. These storage dewars (named after James Dewars) are available in several shapes, such as a flask with loose fittings, an open bucket or a special pressurizing tank. They are designed to keep heat away from the liquid contained in the inner vessel. With the help of vaporizers, the liquid is converted into a gaseous state, such as in the case of liquid nitrogen. A pressure control manifold controls the pressure at which the gas is fed to the process.

Increasing demand for cryogenics in laborites & chemical plants is spurring the demand for cryogenic storage tanks. Also, the rising demand for carbon dioxide and liquid nitrogen in the transportation of frozen foods is driving the demand for the cryogenic storage tanks market. Similarly, in countries, such as Japan, Oman, China, Qatar and many others, the demand for LNG is growing, which is supporting the demand for the cryogenic storage tanks market. However, the high cost of these systems will hamper the growth of cryogenic storage tanks market.
