According to our (Global Info Research) latest study, the global Cryogenic Vacuum Jacketed Hoses market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The cryogenic vacuum jacketed hose is composed of two tubes, with an inner tube used to transport low-temperature liquids and an outer tube for support and vacuum sealing. The annular space between the inner and outer tubes is evacuated to prevent convective heat transfer. This design of hose is currently the most efficient low-temperature liquid transfer system, capable of efficiently transporting cryogenic liquids such as liquid hydrogen, liquid nitrogen, and liquid oxygen, suitable for spaces with complex geometries.
