According to our (Global Info Research) latest study, the global Creatinine Measurement Kit market size was valued at USD 701.7 million in 2023 and is forecast to a readjusted size of USD 1069.3 million by 2030 with a CAGR of 6.2% during review period.

Creatinine is the waste product of creatine, which the muscles use to make energy. Typically, creatinine travels in the blood to the kidneys where it leaves the body in the urine. High levels in the blood might indicate that the kidneys are not working correctly. A serum creatinine test measures the level of creatinine in the blood and provides an estimate of how well the kidneys filter (glomerular filtration rate). A creatinine urine test can measure creatinine in the urine.
