Abstracts

With a credit card, the user does not necessarily need to have any funds deposited with a bank or other financial institution in order to start spending money. The user is able to spend up to a certain limit every month and is expected to pay back all the money they spent at the end of the month.

A crypto debit card is similar to a regular debit card in that the holder uses their own money to make purchases or withdraw cash from an ATM. Unlike regular debit cards, most crypto debit cards draw from the holder's cryptocurrency accounts. This makes them a convenient way to convert cryptocurrency into fiat that you can use to make standard purchases. Other crypto debit cards allow you to preload fiat or digital currencies.

In addition to converting crypto into fiat, crypto debit cards often allow you to reduce foreign transaction fees and easily spend money in multiple currencies. Potential pitfalls include geographical restrictions and the triggering of taxable events for using cryptocurrency.
