The global Crystal Microdermabrasion Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A crystal microdermabrasion machine is a device used for exfoliating the skin. It uses a handheld wand that emits fine crystals, typically aluminum oxide or sodium bicarbonate, onto the skin's surface. These crystals help remove dead skin cells and impurities, revealing smoother and more radiant skin. The machine also typically includes a vacuum suction feature to remove the crystals and exfoliated skin particles. Crystal microdermabrasion is a non-invasive skincare treatment commonly performed in spas and dermatology clinics.
