## Abstracts

The global Crystalline Dextrose market size is expected to reach \$ 7943 million by 2032, rising at a market growth of 3.5% CAGR during the forecast period (2026-2032).

In 2025, sales of crystalline glucose reached 11.44 million tons, with an average price of \$531 per ton.

Crystalline dextrose refers to glucose in a crystalline state, a high-purity glucose product as opposed to liquid glucose syrup and solid whole sugar powder. It is a product of complete starch hydrolysis, produced through a precisely controlled crystallization process, and features high purity, good stability, and ease of storage and transportation.

The production of crystalline glucose almost entirely relies on corn starch as its main raw material. My country has abundant corn starch resources and is one of the world's largest corn starch producers, providing ample raw material security for the crystalline glucose industry. Theoretically, producing 1 ton of crystalline glucose requires approximately 1.22 tons of starch (considering water of crystallization content), but in actual production, due to yield factors, approximately 1.3-1.5 tons of starch are consumed. Besides corn starch, a few companies use rice starch or potato starch as alternative raw materials, but corn starch maintains a dominant position due to its low price and stable supply.

In the cost structure of crystalline glucose, raw material costs account for the largest proportion (approximately 60-70%), with fluctuations in corn starch prices having the most direct impact on total costs; rising corn prices directly increase production costs. Energy costs (steam, electricity) account for approximately 15-20%, mainly used in energy-intensive processes such as liquefaction, evaporation concentration, and drying;

enzyme preparations and chemicals (activated carbon, ion exchange resins, etc.) account for approximately 5-10%; labor, depreciation, and environmental treatment costs account for approximately 10-15%.

This report studies the global Crystalline Dextrose production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Crystalline Dextrose and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
