Crystalline silicon solar cell is a kind of solar cell based on PN junction and photovoltaic effect. It adjusts the electrical conductivity by doping other elements in the silicon to create a built-in electric field. When sunlight shines on the surface of the battery, photons with energy exceeding the band gap width of the silicon material will be absorbed by the silicon, resulting in electron-hole pairs.

In recent years, with the increasing global demand for clean energy and the continuous advancement of technology, the market size of the crystalline silicon solar cell industry has shown rapid growth. The global solar cell market is constantly expanding, with crystalline silicon solar cells accounting for a larger share of the market and expected to continue to grow in the next few years.
