Abstracts

The global CT Generator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The X-ray generator produces X-rays when an electrical current is applied to it. The X-ray generator acts as the primary control mechanism for the entire fluoroscope. It's through the generator that current is allowed to flow into the X-ray tube. The basic function of adjusting the voltage differential and current of the X-ray tube is controlled automatically to maintain optimal contrast and brightness. Generator types used in fluoroscopy include single-phase, three-phase, constant potential, and high frequency.

This report studies the global CT Generator production, demand, key manufacturers, and key regions.
