Computed axial tomography (CAT), popularly known as computed tomography (CT), has diversified applications in the healthcare industry. CT uses computer-processed X-ray images taken from different angles, and combines them to produce cross-sectional images of specific areas of the scanned object. Scope of the Report:

This report focuses on the CT Scanners in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

This device allows medical practitioners to get an internal view of an object without dissecting it. Constant developments in technology and supportive government policies for healthcare funding are expected to boost the growth of the market. In addition, growing incidence of chronic diseases, need for early diagnosis, and high clinical utility of CT are expected to drive the market. Factors such as high installation cost of CT systems and side effects due to radiation exposure hinder the market growth.

The worldwide market for CT Scanners is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
