## Abstracts

The global Cuff Controller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cuff Controller is an instrument for monitoring the pressure of the endotracheal tube cuff, mainly used in ICU. The balloon pressure monitor is used for continuous monitoring and control of the cuff pressure of the endotracheal tube during mechanical ventilation, so as to keep the cuff pressure within a substantially constant pressure range. It is generally believed that the air bag pressure should be maintained at 1.961kPa ~ 2.492kPa (20 ~ 30cmH<sub>2</sub>O), which can effectively avoid the occurrence of aspiration and damage to the tracheal mucosa.

This report studies the global Cuff Controller production, demand, key manufacturers, and key regions.
