## Abstracts

The global Cumin Oil market size is expected to reach \$ 1468 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Global cumin oil sales reached 11,356 tons in 2025, with an average price of US\$85,256 per ton.

Extracted from the seeds of the *Cuminum cyminum*, Cumin oil is a powerful essential oil that can be used for bodily health and for cooking. The aroma of Cumin essential oil is warm, spicy, and nutty. When taken internally with food, water, or in a veggie capsule, Cumin oil can provide digestive aid to the body.

The sole raw material for cumin oil is the mature seeds of cumin (*Cuminum cyminum* L.), mainly produced in India, Iran, Turkey, Syria, and Xinjiang, China. The seeds contain 3-4% essential oil. After drying and cleaning, they are ready for use. The raw material purchase price fluctuates between 5,500-7,000 yuan/ton depending on the origin and season, accounting for about 60% of the ex-factory cost. The processing involves two methods: steam distillation and supercritical CO<sub>2</sub> extraction. Steam distillation equipment is simple, but the oil yield is only 2.5-3.0%. CO<sub>2</sub> extraction can achieve a yield of 3.5-4.0% and produces a more complete aroma, but equipment depreciation, electricity consumption, and solvent recovery mean that energy and labor costs combined account for 25-30%. Therefore, for every 10% increase in raw material prices, the cost of the finished oil increases by more than 6%.

This report studies the global Cumin Oil production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Cumin Oil and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
