Abstracts

The global Cumyl Hydroperoxide (CHP) market size is expected to reach \$ 352 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Cumyl Hydroperoxide (CHP) is an important organic peroxide, typically a colorless to light yellow oily liquid with a characteristic aromatic odor. It is a strong oxidizing agent, readily soluble in organic solvents, and is primarily used as an intermediate in the production of phenol and acetone.

Its upstream production mainly relies on the petrochemical system, using pure benzene and propylene as raw materials. Cumene is produced through an alkylation reaction, followed by an auto-oxidation reaction with air (oxygen) in the presence of a catalyst to produce CHP.

Global sales in 2025 are projected to be approximately 130,000 tons, with an average market price of approximately US\$2011 per ton. The industry's gross profit margin is in the range of 15%-30%.

This report studies the global Cumyl Hydroperoxide (CHP) production, demand, key manufacturers, and key regions.
