Abstracts

According to our (Global Info Research) latest study, the global Cumyl Peroxyneodecanoate market size was valued at US$ 14.66 million in 2025 and is forecast to a readjusted size of US$ 18.67 million by 2032 with a CAGR of 3.5% during review period.

Cumyl Peroxyneodecanoate?also known as Isopropylbenzene Peroxyneodecanoate or Initiator CNP?belongs to the class of low-temperature organic peroxide initiators known as peroxyesters. This product is primarily utilized in the polymerization or copolymerization of monomers such as vinyl chloride and vinylidene chloride; it is typically supplied in the form of an aqueous emulsion or a solvent-diluted solution.

Upstream raw materials principally include neodecanoic acid (or neodecanoyl chloride), cumene hydroperoxide, caustic alkali, hydrogen peroxide-based oxidation systems, solvents, and emulsifiers. The midstream segment involves organic peroxide manufacturers conducting processes such as low-temperature esterification, washing, dilution, emulsification, stabilization, and cold-chain packaging; given the product's limited thermal stability, temperature control during storage and transport, impurity management, and secure packaging constitute the critical stages of this process. Downstream applications primarily target the production of PVC and vinylidene chloride resins, as well as certain ethylene and acrylic polymerization systems.

Projected sales volume for 2025 stands at approximately 1,900 tons, with the prevailing price range falling between $7,000 and $8,000 per ton; leading manufacturers are expected to achieve gross margins ranging from approximately 28% to 42%.
