## Abstracts

The global Cured Polymer Cleaning Solvent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cured polymers are a type of polymer material commonly used in the manufacturing of plastics, coatings, adhesives, etc. During production and processing, it may be necessary to use cleaning solvents to clean equipment and tools. Commonly used curing polymer cleaning solvents include chlorinated hydrocarbons, aromatic hydrocarbons, ketones, alcohols, etc. These solvents can effectively clean cured polymers, but it should be noted that these solvents may be harmful to human health and should be used in a well ventilated environment with corresponding protective measures taken. In addition, suitable cleaning agents should be selected based on the specific situation to avoid damage to equipment and tools. If you are unsure which cleaning agent to use, you can consult the manufacturer or a professional.
