The global Cured Polyurethane Cleaning Solvent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cured polyurethane is a kind of high molecular material, which is usually used to manufacture rigid foam plastics, elastomers, coatings, etc. During the production process, it may be necessary to use cleaning agents to clean equipment and tools. For cured polyurethane, commonly used cleaning solvents include acetone, methanol, isopropanol, xylene, etc. These solvents can effectively clean and cure polyurethane, but it should be noted that these solvents may be harmful to human health and should be used in a well ventilated environment with corresponding protective measures taken. In addition, suitable cleaning agents should be selected based on the specific situation to avoid damage to equipment and tools.
