According to our (Global Info Research) latest study, the global Current Feedback Op Amps market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The current feedback operational amplifier is a high-speed, high-precision operational amplifier, which is different from the traditional voltage feedback operational amplifier. CFOA realizes the amplifying function of the amplifier through current feedback, rather than through voltage feedback. This design makes CFOA have many advantages, including high gain, high bandwidth, low distortion and low noise. CFOA is often used in circuits such as signal processing, filtering, AD/DA conversion, operational amplifiers, inverters/non-inverters, comparators, oscillators, and voltage-controlled oscillators.
