## Abstracts

The global Current Feedback Op Amps market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The current feedback operational amplifier is a high-speed, high-precision operational amplifier, which is different from the traditional voltage feedback operational amplifier. CFOA realizes the amplifying function of the amplifier through current feedback, rather than through voltage feedback. This design makes CFOA have many advantages, including high gain, high bandwidth, low distortion and low noise. CFOA is often used in circuits such as signal processing, filtering, AD/DA conversion, operational amplifiers, inverters/non-inverters, comparators, oscillators, and voltage-controlled oscillators.
